

## 3

## SUMMARY

For one or more portions of one or more regions of an electronic paper assembly having one or more display layers, a method includes, but is not limited to: obtaining information associated with one or more sequences of two or more conformations of one or more portions of one or more regions of the electronic paper assembly and controlling display of one or more portions of one or more display layers of the electronic paper assembly regarding display of second information in response to the information associated with the one or more sequences of two or more conformations of the one or more portions of the one or more regions of the electronic paper assembly. In addition to the foregoing, other method aspects are described in the claims, drawings, and text forming a part of the present disclosure.

In one or more various aspects, related systems include but are not limited to circuitry and/or programming for effecting the herein-referenced method aspects; the circuitry and/or programming may be virtually any combination of hardware, software, and/or firmware configured to effect the herein-referenced method aspects depending upon the design choices of the system designer.

For one or more portions of one or more regions of an electronic paper assembly having one or more display layers, a method includes, but is not limited to: circuitry for obtaining information associated with one or more sequences of two or more conformations of one or more portions of one or more regions of the electronic paper assembly and circuitry for controlling display of one or more portions of one or more display layers of the electronic paper assembly regarding display of second information in response to the information associated with the one or more sequences of two or more conformations of the one or more portions of the one or more regions of the electronic paper assembly. In addition to the foregoing, other method aspects are described in the claims, drawings, and text forming a part of the present disclosure.

For one or more portions of one or more regions of an electronic paper assembly having one or more display layers, a method includes, but is not limited to: means for obtaining information associated with one or more sequences of two or more conformations of one or more portions of one or more regions of the electronic paper assembly and means for controlling display of one or more portions of one or more display layers of the electronic paper assembly regarding display of second information in response to the information associated with the one or more sequences of two or more conformations of the one or more portions of the one or more regions of the electronic paper assembly. In addition to the foregoing, other method aspects are described in the claims, drawings, and text forming a part of the present disclosure.

The foregoing summary is illustrative only and is not intended to be in any way limiting. In addition to the illustrative aspects, embodiments, and features described above, further aspects, embodiments, and features will become apparent by reference to the drawings and the following detailed description.

## BRIEF DESCRIPTION OF THE FIGURES

FIG. 1 is block diagram of an intra-e-paper assembly shown in an environment as optionally associated through information flows with other intra-e-paper assemblies and extra-e-paper assemblies.

FIG. 2 is a block diagram of an exemplary implementation of the intra-e-paper assembly of FIG. 1 showing further detail.

## 4

FIG. 3 is a block diagram showing detail of an exemplary implementation of a content unit of the exemplary implementation of the intra-e-paper assembly of FIG. 2.

FIG. 4 is a block diagram showing detail of an exemplary implementation of a sensor unit of the exemplary implementation of the intra-e-paper assembly of FIG. 2.

FIG. 5 is a block diagram showing detail of an exemplary implementation of a recognition unit of the exemplary implementation of the intra-e-paper assembly of FIG. 2.

FIG. 6 is a block diagram showing detail of an exemplary implementation of an application unit of the exemplary implementation of the intra-e-paper assembly of FIG. 2.

FIG. 7 is a block diagram showing detail of an exemplary implementation of a communication unit of the exemplary implementation of the intra-e-paper assembly of FIG. 2.

FIG. 8 is a block diagram showing detail of an exemplary implementation of a conformation unit of the exemplary implementation of the intra-e-paper assembly of FIG. 2.

FIG. 9 is a block diagram showing detail of an exemplary implementation of a display unit of the exemplary implementation of the intra-e-paper assembly of FIG. 2.

FIG. 10 is a block diagram showing detail of an exemplary implementation of a user interface unit of the exemplary implementation of the intra-e-paper assembly of FIG. 2.

FIG. 11 is a block diagram showing detail of exemplary implementations of intra-e-paper modules of the exemplary implementation of the intra-e-paper assembly of FIG. 2.

FIG. 12 is a block diagram showing detail of exemplary implementations of intra-e-paper modules of the exemplary implementation of the intra-e-paper assembly of FIG. 2.

FIG. 13 is a block diagram of an exemplary implementation of one of the optional extra-e-paper assemblies of FIG. 1 showing further detail.

FIG. 14 is a block diagram showing detail of an exemplary implementation of a content unit of the exemplary implementation of the extra-e-paper assembly of FIG. 13.

FIG. 15 is a block diagram showing detail of an exemplary implementation of a sensor unit of the exemplary implementation of the extra-e-paper assembly of FIG. 13.

FIG. 16 is a block diagram showing detail of an exemplary implementation of a recognition unit of the exemplary implementation of the extra-e-paper assembly of FIG. 13.

FIG. 17 is a block diagram showing detail of an exemplary implementation of an application unit of the exemplary implementation of the extra-e-paper assembly of FIG. 13.

FIG. 18 is a block diagram showing detail of an exemplary implementation of a communication unit of the exemplary implementation of the extra-e-paper assembly of FIG. 13.

FIG. 19 is a block diagram showing detail of an exemplary implementation of a user interface unit of the exemplary implementation of the extra-e-paper assembly of FIG. 13.

FIG. 20 is a schematic diagram depicting regions of an exemplary implementation of an intra-e-paper assembly.

FIG. 21 is a side elevational sectional view of an exemplary implementation of the intra-e-paper assembly of FIG. 1 showing

FIG. 22 is a top plan view of an exemplary implementation of the intra-e-paper assembly of FIG. 1 in a partially folded state.

FIG. 23 is a side elevational view of the exemplary implementation of the intra-e-paper assembly of FIG. 22.

FIG. 24 is a side elevational view of an exemplary implementation of the intra-e-paper assembly of FIG. 1 showing selection capability.

FIG. 25 is a side elevational view of an exemplary implementation of the intra-e-paper assembly of FIG. 1 showing association between regions due to a depicted conformation.
